

# **Programming Fundamentals**

## **Lab 07**

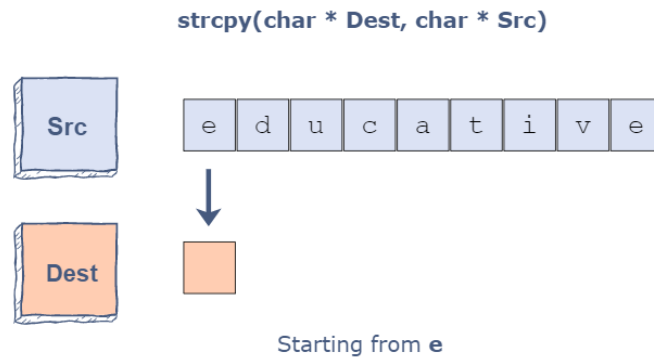

**Topics: Strings and File Handling**

**Faculty of Information Technology**

**UCP Lahore Pakistan**

## Question 2:

Write a program in C++ that reads a character string from the user, you have to make the 2 strings source string and destination string, pass strings to the user defined function **my\_own\_string\_copy(char \*string, char \*Src);** and copy the source string into the destination string according to given below concept.

**Source String: I am Ali**

**After Copying**

**Destination String: I am Ali**

## Question 2:

Write a program in C++ that reads two strings from the user Str1, Str2 in main function and compare those strings using your own function **my\_own\_string\_compare(char \*Str1, char \*Str2);**

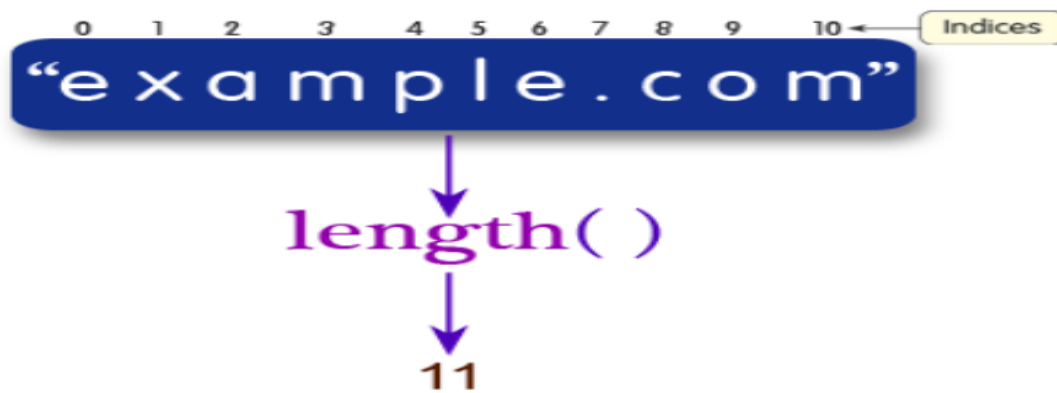

## Output

```
Enter String 1 = Ai
Enter String 2 = Aliii
Both the strings are different
Enter String 1 = Ali
Enter String 2 = Ali
Both the strings are same
```

### Question 3:

Write a program in C++ that reads a string from the user and pass that string to calculate the string length using `int my_own_string_calculate_length (char *Str1);`

## Question 4:

Write a program in C++ that reads quizzes marks of students from a file, and displays the highest marks obtained by each student. Read marks for each student till -99

### Example:

#### Data.txt

```
7.4 2 9.9 3.8 8.8 -99
```

```
4.4 1.5 6 -99
```

```
7.4 2 9.9 3.8 8.8
```

```
4.4 1.5 6
```

## Question 5:

Write a program in C++ that reads full names from a file and asks a user to select any 2 rows. Swap the names at the user selected row numbers.

### Example:

#### Data.txt

```
Ali Haider
```

```
Ahmad Raza
```

```
Bilal Ijaz
```

```
Muhammad Rameel
```

#### List of Names:

```
Ali Haider
```

```
Ahmad Raza
```

```
Bilal Ijaz
```

```
Muhammad Rameel
```

**Selected 2nd and 4th rows:**

Ali Haider

Muhammad Rameel

Bilal Ijaz

Ahmad Raza

**Question 6:**

Write a program that reads data from a file and calculates the sum of data row-wise and column-wise.

**Example:**

**Data.txt**

```
1.6 10.2 33.7 99 20.5 -99
```

```
44 50.9 96.1 -99
```

```
74 50 99 19.1 -99
```

```
8 9 -99
```

```
1.6    10.2    33.7    99    20.5
```

```
44     50.9    96.1
```

```
74     50     99     19.1
```

```
8      9
```

Sum row-wise: 165, 191, 242.1, 17

Sum column-wise: 127.6, 120.1, 228.8, 118.1, 20.5

## Question 7:

Write a program in C++ that reads the data from a file and sorts the data in ascending or descending order. Each row ends at -99

### Example:

#### Data.txt

12 55 7 -99
56 4 89 14 32 -99
33 41 53 -99

	12	55	7		
Original Data:	56	4	89	14	32
	33	41	53		
	4	7	12		
Updated Data:	14	32	33	41	53
	55	56	89		

## Question 8:

Write a program in C++ that asks a user to enter a position (row, col) and removes the value at that position and update the data accordingly

### Example:

	12	55	7		
Original Data:	56	4	89	14	32
	33	41	53		
	12	55	7		
Remove from (2, 3):	56	4	14	32	
	33	41	53		

**Question 9:**

Update task 5, and add option for inserting values at any position along with removing it.

**Example:**

Original Data:	12	55	7		
	56	4	14	32	
	33	41	53		
Add 89 at (2, 3):	12	55	7		
	56	4	89	14	32
	33	41	53
